

Canon Camera WIA Driver for Windows XP

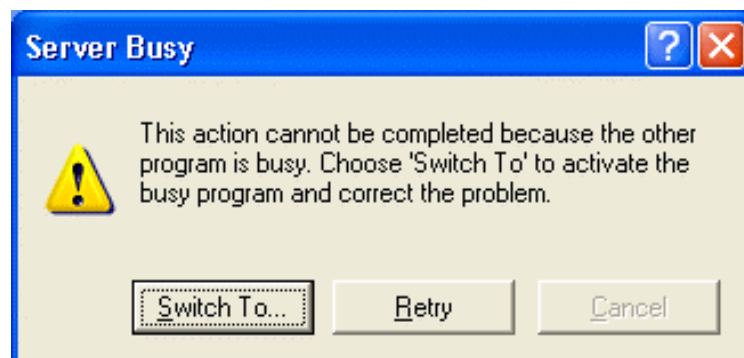

Supported Cameras:

PowerShot A60, PowerShot A70, PowerShot A300, PowerShot S50, Digital IXUS 400

Notification:

It is not necessary to install the WIA driver when the camera models in the list above are connected to the Windows XP PC, because the camera supports PTP (Picture Transfer Protocol) and the standard Windows XP driver can be used. However, there are some limitations as follows:

- When a camera is connected with a lot of images inside, it takes a long time before the thumbnails or the wizard are shown if the images are downloaded using Windows Explorer or "Camera & Scanner Wizard".
 - How long it takes to download images depends on your PC performance.
- When a camera is connected with a lot of images inside, following message may be displayed if you download using ZoomBrowser EX.

- When this message is displayed, please click [Switch to...] button. And if this message is displayed repetitively, please keep clicking [Switch to...] button until the message disappears.

If you have these problems, please download "Canon Camera WIA Driver for Windows XP".
